

Association Issue Dependencies

Issue: Redundancy in association end multiplicities, ordering, and uniqueness (KERML-36)

Proposal: Cross features owned by association ends (KERML-85)

Binary association ends always ordered (KERML-38)

Context-dependent meanings for feature multiplicity, ordering, and uniqueness (KERML-37)

End feature multiplicity textual notation (KERML-26)

Misleading term and textual keyword for association participant features (KERML-34)

Concrete Syntax

Syntax

Resolved by

Affected by

Blocked by

Number of association end feature values, semantics (KERML-35)

Association end features are not necessarily consistent with corresponding features of associated classifiers (KERML-41)

N-ary association end multiplicity, semantics (KERML-40)

Connector ends cannot give smaller lower multiplicity than their association ends (KERML-55)

Language Specification

Link participant feature called an association end (KERML-39)
