

# Association Issue Dependencies

Issue: Redundancy in association end multiplicities, ordering, and uniqueness (KERML-36)

Proposal: Cross features owned by association ends (KERML-85)

Association end features are not related to corresponding features of associated classifiers (KERML-41)

Binary association ends always ordered (KERML-38)

Context-dependent meanings for feature multiplicity, ordering, and uniqueness (KERML-37)

**Language Specification** Link participant feature called an association end (KERML-39)
